Professional Summary

Fresh graduate in Data Science from Telkom University with hands-on experience in machine learning, natural language processing, and AI integration. Proficient in building end-to-end data solutions using Python, Scikit-learn, and NLTK, with a proven track record of developing an ontology-based question answering system for Quranic text translation. Successfully integrated Google Gemini API and OCR-based data extraction pipeline during an internship at a health-tech startup. Eager to leverage a strong analytical and AI foundation to deliver impactful data-driven solutions.

Experience

Skincluv.id

Jun 2026 - Present

AI Integration Intern

Remote

A local health-tech startup developing AI-powered skincare analysis tools for consumers through mobile and web platforms.

- Designed and implemented AI-powered data extraction pipeline using Google Gemini API and OCR to analyze skincare product composition from image input.
- Structured and standardized AI output in JSON format to enable consistent data flow between backend and frontend systems.
- Built and maintained RESTful API using Node.js and Express.js to handle image input and coordinate the full analysis pipeline.
- Applied prompt engineering techniques to optimize Gemini API responses for structured skincare ingredient breakdown.
- Contributed to cross-functional collaboration with the frontend team to ensure accurate data delivery and system integration.

West Java Province Water Resources Office (DSDA)

May 2025 - July 2025

Data Analyst Intern

Bandung

A provincial government agency under West Java responsible for managing water resources, irrigation systems, and hydrological data across the region.

- Developed an interactive hydrological analytics dashboard using Streamlit, Pandas, Plotly, and PyDeck to support irrigation water management decision-making across West Java, consolidating data from 6 UPTD regions and 80+ irrigation systems.
- Implemented end-to-end data preprocessing pipeline to standardize heterogeneous multi-decade Excel datasets, resolving structural inconsistencies and handling missing values into a unified centralized master dataset.
- Built advanced hydrological analytics features including Q80 dependable discharge computation, Flow Duration Curve (FDC) modeling, seasonal trend analysis, and statistical interpolation for long-term water availability assessment.
- Designed geospatial visualization using PyDeck to map irrigation system coverage and regional discharge distribution across West Java province.
- Delivered executive-level KPI monitoring and UPTD-based faceted comparisons, heatmaps, and hydrological stability assessment to support evidence-based planning for sustainable irrigation management.

Technical Skills

- Programming Language** : SQL, Python 3(Library: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, NLTK, SpaCy)
- Visualization & Tools** : Tableau, Power BI, Streamlit, Matplotlib, Seaborn, Plotly, Google Data Studio, Jupyter Notebook, Google Colab
- Data Analysis** : Data Cleaning, Exploratory Data Analysis (EDA), Descriptive Statistics, Hypothesis Testing, Correlation Analysis, Regression Analysis, Sentiment Analysis, Clustering Analysis
- ML & AI** : Supervised Learning, Unsupervised Learning, Natural Language Processing (NLP), Ontology / Knowledge Graph, Question Answering System, Recommendation System, LLM Integration
- Additional Tools**: Git, GitHub, Spreadsheet (Ms. Excel & Google Sheets), Google BigQuery (basic)
- Language** : Bahasa Indonesia (Native), English (Professional Working Proficiency)

Education

Telkom University

Aug 2021 - Jan 2026

Bachelor of Data Science

Bandung

Certification

- Data Fundamentals : IBMSkillsBuild
- Artificial Intelligence Fundamentals : IBMSkillsBuild
- Other programming and data analytic-related certifications

Projects

West Java Province Water Resources Service (DSDA) Dashboard

June 2025 - July 2025

Full Stack Data Analyst

- Developed a government-grade hydrological analytics platform consolidating discharge records from 80+ irrigation systems across 6 UPTD regions in West Java to support irrigation water management decision-making.
- Implemented full ETL pipeline to standardize heterogeneous multi-decade Excel datasets, resolving structural inconsistencies and missing values into a unified master dataset with geospatial visualization using PyDeck.
- Built advanced hydrological analytics including Q80 dependable discharge computation, Flow Duration Curve (FDC) modeling, seasonal trend analysis, and statistical interpolation for long-term water availability assessment.

Tools : Python, Streamlit, Pandas, Plotly, PyDeck, Microsoft Excel

Faculty of Informatics Dashboard

June 2024 - December 2024

Project Manager

- Designed a multi-page Business Intelligence dashboard integrating 9 institutional domains — including student admissions, research, HR, infrastructure, and education quality — into a unified analytical platform for faculty management.
- Implemented interactive KPI monitoring, dynamic slicers, cross-filtering, matrix tables, and drill-down analysis to enable stakeholders to explore institutional performance trends and operational metrics from a single centralized platform.
- Consolidated heterogeneous institutional datasets across academic and administrative domains to support data-driven decision making and strategic planning.

Tools : Microsoft Power BI, DAX, Microsoft Excel

McDonald's Sentiment Analysis

October 2023

- Performed end-to-end sentiment analysis on McDonald's customer review dataset using NLP preprocessing techniques and machine learning classification models to classify customer feedback as positive, negative, or neutral.
- Visualized sentiment distribution, keyword frequency trends, and customer experience insights through an interactive Streamlit dashboard to surface actionable findings for business improvement.
- Applied text preprocessing pipeline including tokenization, stopword removal, and TF-IDF vectorization to prepare raw review data for model training.

Tools : Python, NLTK, Scikit-learn, Pandas, Streamlit, Seaborn, Matplotlib
